### **Neurologic Aspects Of Systemic Disease**

DIFFERENTIAL DIAGNOSIS Since the periventricular hyperintensities have common histologic features, such as increased interstitial water, demyelination, and gliosis, it should not be surprising that their MR appearance can be quite similar. Nevertheless, differential clues are often present on the images. The normal Virchow-Robin spaces should not be a problem.

MTHFR gene mutations can cause absolutely no symptoms at all. They can also cause severe irreversible health conditions such as Down's syndrome. Research is still pending on which medical conditions are caused by, or at least partially attributed to, the MTHFR gene mutations. From the partial list I recently went through on Medline, these are [...]
