5 Foods That Negatively Affect Your Child's Mood

Causes. When you have a food allergy, your immune system mistakenly identifies a specific food or a substance in food as something harmful. In response, your immune system triggers cells to release an antibody known as immunoglobulin E (IgE) to neutralize the allergy-causing food or food substance (the allergen).

Food allergy - Symptoms and causes - Mayo Clinic

Help your child stay accustomed to the foods responsible for 90% of common food allergies with patented food blend SpoonfulOne.

SpoonfulOne: Baby & Child Nutrition, Ahead of Common Food ...

What's an allergy? An allergy is an immune reaction to a substance in the environment called an allergen. When a child with allergies comes into contact with an allergen – either by touching it, breathing it, eating it, or having it injected – her body mistakenly views it as a dangerous invader and releases histamines and other chemicals to fight it off.
